

Push-to-Mobile E-Mails anywhere, anytime

Secure flexible push service for your mobile terminal: e-mail, calendar, contacts and more on the move

Your benefits

- Fast provision of mobile e-mail functionality, calendar and contacts
- Seamless integration into your existing IT infrastructure
- Secure data transmission
- Increased reachability and response speed
- Rapid, experienced support from the Lufthansa Systems help desk
- Cost transparency due to monthly settlement per user

How about you?

How much time do you really spend at your desk?

Studies show that employees are often on the move, spending just 30% of their time in the office. With Push-to-Mobile, access to current information and your data is also possible when you are away on business.

Parallel to increasing mobility, e-mail has established itself globally as the most widely used means of communication for data exchange in companies. Using e-mail you communicate internally and externally, exchange information and ideas, sell products, manage knowledge and stay informed.

Do you want to employ your valuable working time more efficiently?

With the e-mail push service you can simply react more quickly and make active use of waiting times.

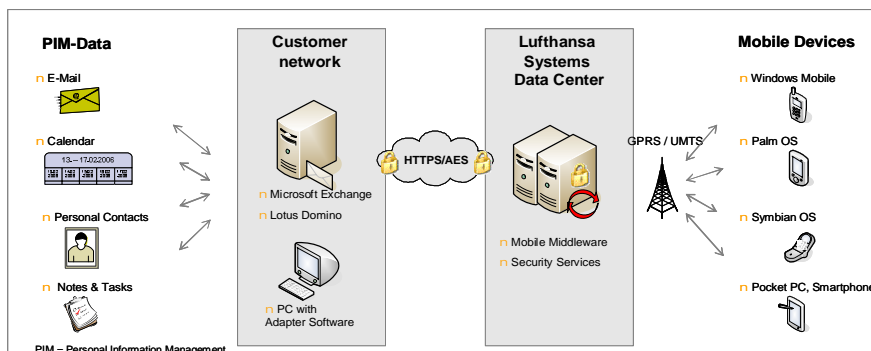

The product

With Push-to-Mobile you receive and send your electronic mail automatically and in real time on your mobile terminal. Synchronization can be start on either a scheduled or a manual basis. Changes can also be synchronized automatically in your calendar and personal contact data. This means that you only update your data once and can also use the main functions of your e-mail client while on the move.

Lufthansa Systems provides the e-mail push service and operates the necessary mobile platform for you. You install the client software on your mobile terminals and adapter software on one of your PCs to monitor the e-mail mailboxes. A mobile carrier medium, e.g. GPRS or UMTS, is provided via your mobile telephone contract.

Solution highlights

- Corporate e-mail link, contact data and calendar for your mobile employees – anywhere, anytime
- Minimal investment volume means low financial risk
- Independence from hardware and software manufacturers and providers to give you flexibility
- Security and stability of Lufthansa Systems as an IT full-service provider you can rely on

Flexible functionality

Lufthansa Systems offers you – independent of mobile network operators – a unique, company-wide solution for the provision of e-mail and PIM (Personal Information Management) data for a selection of mobile terminal devices. Push-to-Mobile supports numerous handhelds, e.g. Windows Mobile, Pocket PC and Smartphone, as well as Palm and Symbian operating systems.

The administrator can integrate the terminal devices into the company's IT infrastructure via a central server and utilize existing hardware investments. In addition, the product provides many provision configurations for integration into existing corporate environments and security regulations. No adaptations need be made to your security architecture.

Minimal investment volume

A monthly basic charge per user makes the use of Push-to-Mobile calculable for you.

ROI and TCO analyses support the intuitive promotion of mobile e-mail solutions.

The key question asked by IT decision-makers is not, however, whether mobile solutions are necessary, but how they can be introduced and operated cost-effectively.

Push-to-Mobile Basic

- n 10-48 users
- n PIM-synchronisation
- n Sync-server in a shared environment

- n Mobilization of business processes
- n Integration in security-policies

A scalable solution

We provide you with a solution that grows flexibly with the number of users and your requirements.

The scalability of mobile solutions is a key economic factor for your IT investment.

In the long term, mobile solutions can be used in many application areas. The different Push-to-Mobile product versions take possible growth into consideration from the beginning and are part of an integrated infrastructure service portfolio.

Security and stability

The transmission of PIM data is always encrypted, with the use of open, certified standards for security procedures guaranteeing a high degree of data integrity.

In addition, maximum security requirements apply with regard to controlling access to the hosted components within the Lufthansa Systems data center environment.

The security of our customers' IT infrastructure has top priority. We have many years of experience in the network and communications environment, and this embraces both the physical security and the wireless security of your mobile terminal device.
