Below are my comments on behalf of EDS LA:

On C15, add Replace (R) option to UAP, we don't think this is necessary. The Add (A) option besides adding the missing data, can also replace existing data. The only difference between the R and A is that for R, if no data is sent and data exists on the responding carrier, the responding carrier will need to delete it's data. There is no benefit in doing that as for APIS, more data is always good than less data. We cannot think of case where it is good to delete the responding carrier's already existing data. If the responding carrier chooses to retain it's data, then the R option becomes the same as the A option.

We agree with the other 2 proposals (C1/16 and C25).

Thanks,
