# Precise airport maps on your flight deck

Lido/AMDB

---

## What Lido/AMDB is all about

Lufthansa Systems' Aerodrome Mapping Database Lido/AMDB is a highly accurate and geo-referenced representation of the airport layout. Using our Lido/AMDB with an integrated navigation display or portable Airport Moving Map application on your flight deck supports you finding your way during taxi operations in all weather conditions.

Lido/AMDB includes runway geometries, taxiways and buildings, as well as further attributes such as surface type, object identifier and runway slope. This database is generated using geo-referenced satellite images which is the best way to position the own-ship symbol accurately on the chart.

- Enabling safe and efficient ground operation
- Compatible with various Airport Moving Map applications
- Consistent data sources and synchronized revision process with other Lido/Navigation products
- Certified EASA LoA Type I and II
