Taxi with confidence

Lido/AMM

What Lido/AMM is all about

Maintaining situational awareness while taxiing at the world's largest and most congested airports can be a challenging task. The Lido/AMM (Airport Moving Map), available on Windows and iOS, displays geo-referenced airport maps which increase pilots' situational awareness and enable safer taxi operations.

The application displays directional own-ship position and provides alert and advisory messages preventing runway incursions. Pilot annotations and the highlighting of parking positions further ensure safe and efficient taxi operations.

- Increased situational awareness during taxiing
- Prevents runway incursions
- Visual warning when entering runways and safety zones
- Powered by Lido/AMDB data
- Integrated with various Aircraft Interface Devices (AIDs)
